Re: [Role Title]

Dear Hiring Manager,

I am applying for the [Role Title] position at [Company]. I am interested in [Company] because [one sentence tied to mission, product, team, or recent news]. I bring experience using SQL, Excel, and data visualization to turn messy data into clear, usable insights for decision-making.

[Middle Paragraph — choose ONE and delete the others]

Option 1 (Data Analyst: SQL + dashboards):

In recent projects, I used SQL to join and clean source tables, validate metrics, and build dashboards that made performance trends easy to understand. I translate ambiguous questions into clear metric definitions (for example, what "active," "retained," or "churned" means) and deliver visual reporting that stakeholders can trust. I would apply the same approach at [Company] to improve reporting quality and speed.

Option 2 (BI Analyst: stakeholders + reporting):

I bridge stakeholders and data by clarifying requirements, documenting metric definitions, and delivering reporting that aligns teams on a single source of truth. I iterate quickly by sharing early dashboard versions, collecting feedback, and improving accuracy and usability. At [Company], I would focus on building reporting that supports decisions and reduces recurring manual work.

Option 3 (Early career: fundamentals + ownership):

I am early in my career, but I focus on fundamentals: clean data, consistent definitions, and clear documentation. I learn quickly, ask precise questions, and deliver work that is reliable and repeatable. I am excited to grow in this role while contributing strong execution and a continuous-improvement mindset at [Company].

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to [Company].

Sincerely,

[Your Name]
